

ENVIRONMENT WASHINGTON Your Summer Report

Hope for our wild forests

On Inauguration Day, President Joe Biden wasted no time in taking action, signing 17 executive orders. For those of us who care deeply about our wild forests, one piece in particular got us clapping. Public Lands Campaign Director Len Montgomery explains.

President Biden directed the U.S. Department of Agriculture to immediately review restoring “roadless area” protections for our largest national forest: the vast, old-growth Tongass National Forest in southeast Alaska. It’s the world’s largest intact temperate rainforest, nicknamed “America’s Amazon” for its ancient trees and rich biodiversity.

What are “roadless area” protections? Twenty years ago, the Clinton administration finalized a key rule that protected wild areas in our national forests. Following public comments from 1.6 million Americans (many of which our national network’s advocates helped collect), the regulation, which protected still-wild areas of our national forests from “road construction, road reconstruction and timber harvesting,” safeguarded a whopping 58.5 million acres.

Known as the Roadless Rule, this important conservation tool has ensured that our wildest and most awe-inspiring spaces haven’t suffered from traffic, vehicle noise pollution, or water pollution from vehicle oil and grease. Beyond that, the Roadless Rule protects these acres from industrial timber harvesting, so our forests can grow naturally—allowing different-aged trees to grow near one another and undergrowth to thrive. The larger the roadless area, the more uninterrupted habitat there is for wildlife.

This is particularly important for species that need larger areas

In 2000, our national network’s staff held an event as part of our campaign to secure protections for 58.5 million acres of roadless national forest land.

to roam, such as wolverines and mountain lions. The Roadless Rule has also helped protect prime backcountry recreation land, much to the delight of hikers, climbers, fishing enthusiasts, snowshoers and cross-country skiers.

For people adjacent to these important areas, this protection is priceless. The U.S. Forest Service reported more than 149 million visits to national forests in their fiscal year 2019, and nearly half of all visitors came from within 50 miles of those public lands.

Thanks
for making it
all possible

Whole Foods earned an 'F' on plastic packaging. We're urging it to do better.

Whole Foods touts its commitment to “planet before profits.” But to live up to that claim, it’ll need to deal with its contribution to the plastic pollution crisis.

Right now, it’s not doing enough. A report by the environmental shareholder advocacy group As You Sow gave the grocer an “F” grade for its policies on single-use plastic

we’ve beaten that prediction, reaching 10 percent this year. Over the past decade, wind power generation has tripled and solar generation has grown 30-fold.

“America’s growth in clean energy is primarily the result of states taking action,” said Emma Searson, 100% Renewable Energy campaign director with Environment America Research & Policy Center. “Forward-looking policies designed to tap into each state’s vast renewable resources are creating a virtuous cycle of technological advancements, falling costs and greater deployment.”

According to the report, Washington ranked among our nation’s renewable energy leaders, with the third-highest number of cumulative electric vehicle sales and the fifth-highest number of electric vehicle charging stations.

Environment Washington, family testify for Bruce Speight Act to get lead out of school drinking water

When it comes to protecting schoolchildren from lead in their drinking water, Washington gets an “F” according to an Environment Washington analysis.

During Washington’s 2021 legislative session, Environment Washington’s Pam Clough joined the Speight family to advocate for the Bruce Speight Act, which addresses lead contamination in school drinking water. The policy honors the work of Bruce, who served as our state director until his passing in 2019, by ensuring that all taps in public schools across the state are tested for elevated lead levels and setting an enforceable limit on the amount of lead in drinking water of 5 parts per billion.

“Fortunately, the Legislature passed the Bruce Speight Act this session, but the work is far from over,” said Pam. “This bill will raise Washington state’s grade to a ‘C+.’ We are committed to doing all that we can in the coming months and years to get our state to an ‘A.’”

Pam added, “Bruce would be proud of this bill as a first step, and he would urge us to never stop fighting to ensure safe drinking water for all Washington’s children.”

On Jan. 12, our national research partners at Environment America Research & Policy Center held a virtual press conference launching their campaign to get Whole Foods to move beyond plastic.

packaging. On setting goals to reduce its unnecessary plastic waste, as well as transparency on those efforts, Whole Foods fell behind Target, Kroger and Walmart.

“Our wildlife, oceans and communities are choking on plastics and deserve better,” said Kelsey Lamp, director of our national research partner Environment America Research & Policy Center’s Protect Our Oceans campaign. “We must prioritize wildlife over waste, and we should expect more from a grocer known for its environmental vision.”

Environment Washington Research & Policy Center is calling on Whole Foods to lead by example by eliminating single-use plastic packaging from store shelves.

Report: Renewable energy is surging across US, Washington

In 2001, it was predicted that by 2020 America would be generating just 1 percent of our electricity from renewable energies.

Fast forward to the present: According to “Renewables on the Rise 2020,” a report by our national research partners at Environment America Research & Policy Center,

Page 1 story continued: Hope for our wild forests

That means locals' full enjoyment of these natural spaces are, in part, dependent on this rule. Whether you're heading off with fishing poles, hiking gear or a backcountry permit, this regulation means you can truly and fully lose yourself in nature for a couple hours or a few days.

But the full application of the Roadless Rule was put into question in October 2020. The Trump administration finalized a decision that removed these protections from the Tongass National Forest, often called the "crown jewel" of the national forest system.

Now, President Biden has started the process of rectifying that ill-conceived decision. With the president's executive order, the Forest Service will review the previous administration's decision. Assuming that agency decides the rollback was a bad call, it will likely need to begin a new rulemaking process to reinstate the rule.

To avoid the yo-yo effect of one president rescinding and another reinstating protections for wild areas in our national forests, Congress must pass the Roadless Area Conservation Act. Doing so would upgrade the Roadless Rule from an agency regulation into an enshrined law. This would protect it from political winds and ensure that it, along with the Clean Air Act and Clean Water Act, serves as a staple of America's commitment to protecting our health and wild places.

The Roadless Rule has saved wildlife, preserved clean water sources, and provided the stage for thousands of hours of recreation and outdoor endeavors for the last 20 years. We must keep it that way for generations to come.

By Ellen Montgomery, Director, Public Lands Campaign

In a video our national network released in February, former staff, canvassers and advocates talked about their work on our 2000 campaign to save the Tongass and millions more acres of national forest.

Your Summer Report

VOLUME 13 | NO. 3 | 2021

Our mission:

We all want clean air, clean water and open spaces. But it takes independent research and tough-minded advocacy to win concrete results for our environment, especially when powerful interests stand in the way of environmental progress.

That's the idea behind Environment Washington, Inc., a project of Environment America, Inc. We focus on protecting Washington's air, water and open spaces. We speak out and take action at the local, state and national levels to improve the quality of our environment and our lives.

Environment Washington calls on Amazon to stop the sale of bee-killing pesticides

To save the bees, we're asking one of the world's biggest retailers to stop selling the pesticides that kill them.

In March, Environment Washington, along with our national network, kicked off our campaign to call on Amazon to take neonicotinoid pesticides (or "neonics")—the substances most closely linked to a troubling decline in bee populations over the past two decades—off their (virtual)

shelves. Our ask is far from unprecedented: Home Depot and Lowe's have already pledged to phase out the use of neonics on their live plants, and Lowe's has committed to taking the pesticides off its shelves altogether.

"We need to reduce the use of this pesticide that's contributing to the collapse of our most important pollinators," said Malia Libby, Save the Bees campaign associate with our national partner, Environment America. "Amazon should join other retailers in doing the right thing and taking it off its shelves."

Our national network will be gathering petition signatures from thousands of people this summer calling on Amazon to act.

Studies show that dangerous herbicide use plays a significant role in bee die-offs.
